

IMPORTANT NOTICE

To whom it may concern,

This letter is in regard to our **RAIDAR Snake Defence** units. It is of high importance you read this letter and contact us if there is any confusion.

Currently all **RAIDAR MP PLUS Snake Defence** units come as 3V units.

As of December 2014, ALL **RAIDAR Snake Defence** units (both MP PLUS & MP Lite Plus) will come as a 5V unit.

What this means

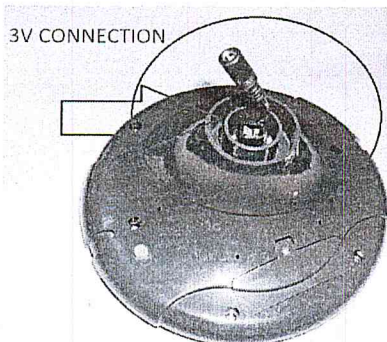

If an AC adaptor is required then the customer will need to be able to determine if the unit is 3V or 5V.

How do I tell the difference?

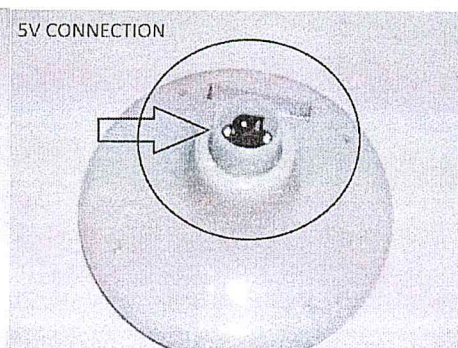

The 3V unit is only in the MP Plus (dark green head) and is easily recognised by either a 3V label on the section that fits into the stake or visually as shown in Fig 1 because it has a plug connection for the AC adaptor in the middle and an extended plug for the stake connection.

The 5V units (the new LITE unit and the Latest MP Plus dark green unit) only have a single plug point that takes both the AC adaptor and the stake as shown in Fig 2 & Fig 3.

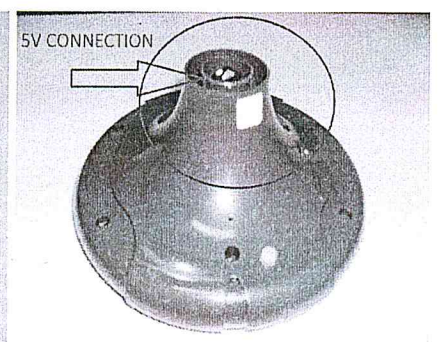

3Volt Connection Fig 1

5V Connection Fig 2

5V Connection Fig 3

Dated 1/12/2014

It is absolutely critical that this is understood to avoid customers receiving the incorrect adaptor when purchasing one for their Snake Defence unit, as providing the incorrect adaptor may lead to serious damage to the Snake Defence unit.

Please contact us if you have any further questions in relation to this issue or any other issues regarding any of our products.
